Agile Team Charter

CampusMarket | Cape Peninsula University of Technology

1. Project Purpose

CampusMarket is a secure, mobile-first marketplace where CPUT students and staff can buy and sell second-hand items, post campus notices and manage transactions in a trusted, university-focused space.

Our shared purpose is to build a safe and reliable platform where every marketplace action is tied to an authenticated user, and to practise working as an Agile team while we do it.

2. Team Members and Roles

Team member	Role	Main responsibilities
Ebenezer	Project Lead	Project schedule (WBS and Gantt chart), communication plan, deployment, compiling the deliverables documentation
Jayden Avontuur	Database, Authentication and Security Developer	Supabase database and authentication, the authentication middleware that protects the API routes, payment security
Matthew	Backend Developer	Express backend server and API routes
Siphesihle	Frontend Developer	React and TypeScript frontend, user stories and product backlog

3. Team Values

- **Open communication:** we share progress, problems and questions early instead of waiting to be asked.
- **Accountability:** each member owns their cards and keeps them up to date on the board.
- **Respect:** every idea is heard, and feedback is about the work, not the person.
- **Quality:** we aim to deliver work that is tested, secure and understandable to the rest of the team.

4. Working Agreements

Communication

- The team uses a group chat for day-to-day questions and the shared Trello board as the single source of truth for task status.
- Blockers are raised with the team straight away, not left until the next meeting.
- Meeting decisions and action points are recorded in the Agile Logbook.

Task management

- Work is tracked on Trello using four lists: Product Backlog (To Do), Current Sprint, In Progress (Doing) and Completed (Done).
- A card moves to Current Sprint only when the team has agreed to do it in the sprint, and to Done only when it meets the Definition of Done.
- Each card has an owner. If someone cannot finish a card, they tell the team so it can be reassigned.

Code and version control

- All code lives in the shared GitHub repository, and team members work on their own branches.
- Changes are merged into the main branch through pull requests that another member reviews.
- Secret keys and .env files are never committed to the repository.

5. Definition of Done

A task is complete when:

- The feature works as described in its user story and acceptance criteria.
- The code has been reviewed by at least one other team member and merged through a pull request.
- Protected features require a signed-in user and have been tested with and without a valid login.
- The card on Trello has been moved to Completed (Done).

6. Scope and Boundaries

In scope: user authentication and protected routes, product listing and browsing, bulletin board posts with expiry dates, and transactions with an escrow-style status flow, all in a mobile-first interface.

Out of scope: anything not needed for these core features. New ideas are added to the Product Backlog and discussed before they are accepted.

7. Decision Making and Conflict Resolution

- Decisions that affect the whole team are made together, and the Project Lead has the final say if the team cannot agree.
- Disagreements are first discussed between the people involved. If they are not resolved, they are raised with the whole team.
- If a team member is not contributing as agreed, the team talks to them first and then involves the lecturer if the problem continues.

8. Reviewing This Charter

This is a living document. The team revisits it whenever feedback or changes in the project mean our ways of working need to change, and updates it so it always reflects how we actually work.

9. Team Agreement

By signing below, each member agrees to follow this charter.

Name	Role	Signature
Ebenezer	Project Lead	_ebenezer_
Jayden Avontuur	Database, Authentication and Security Developer	_jayden_
Matthew	Backend Developer	_matthew_
Siphesihle	Frontend Developer	_siphesihle_
